Keep the brake disc repair simple- with the new febi brake disc

Brake discs are safety critical components. febi is aware of its responsibility and we refuse to compromise on quality. Detailed material and structural examinations ensure absolute safety when selecting our cast material. This ensures that operational reliability and a long service life is attained.

New in the febi range is the brake disc febi 104292 suitable for DAF vehicles. Its special construction ensures improved heat dissipation and lower tension in the material. With the original part and competitive products can be found often extensive fastening material such as retaining clips, clamps or other components. The high amount of accessories increases the installation effort and the Brake disc change is more complicated than necessary. However, the ECE R90 certified febi brake disc will be dispensed with extensive accessories, which will result in a fast, easy and uncomplicated repair. In the case of 104292, the disc is simply aligned with the hub and secured using the additional bolts supplied in the kit. It could not be easier.

With our wide range of brake discs febi covers the common models of the top seven European commercial vehicle manufacturers Mercedes-Benz, MAN, Volvo Trucks, Scania, Renault Trucks, DAF Trucks and Iveco.
