## Cup Holder

**Function**

The retractable cup holders withdraw into the dashboard when not in use.

**Cause of failure**

The plastic moulding on the flip down door, which forms part of the operating mechanism, is under tension and can crack. This results in the cup holder becoming incorrectly aligned and not closing properly. Another issue is that one of the hinges on the cup holder can wear or break, resulting in the cup holder assembly sticking in the closed position or not holding a cup.
