Deflection pulley 532 0410 20

Deflection pulley 532 0410 20 is used in many different model engines. As a result, screws of different lengths are used depending on the specific characteristics of the engine.

From a technical point of view, the deflection pulley can be safely mounted using the original screws installed at the factory without any problem. This is why deflection pulley 532 0410 20 is now only supplied without screws.

Please observe the vehicle manufacturer specifications!
