

# Squeeze Pliers

The crimping tool permits precise hexagonal crimping of ferrules with and without insulating collar. It is easy to work with ferrules with cross-sections of between 0.08 mm<sup>2</sup> and 16.0 mm<sup>2</sup> in one tool without the need for adjustment. With the swivel positioner fitted, accurate working is possible even for ferrules

with a small cross-section. The swivel positioner can be attached to the front or back of the tool to permit optimum right-handed and left-handed use of the tool. The small width of the handle, the low weight and the ergonomic, non-slip soft grips guarantee excellent handling of the tool.

**Cross section:** 0,08 to 16 mm<sup>2</sup>      **Weight:** 500 g  
**Plug type:** Cable End Sleeve      **Tools:** with positioner  
**LxW:** 215 x 75 mm      **Info:** for isolated contacts for isolated contacts
