

Flash CS70 Battery Charger

While the battery is buffered during long diagnostic operations or during software updates, the Flash saves control devices from data loss and irreparable damage by providing a constant power supply. The flexible external power supply also adjusts to the energy require-

ment of the vehicle. Thanks to the high charging capacity, only short charging times are required. The inbuilt refresh function enables even extremely low batteries to be regenerated.

Rated Voltage:	12 V	WxHxD:	324 x 235 x 108 mm
Input Voltage:	230 V	Charger Cable Length:	5 m
Max. charging current:	100 A	Cable Cross Section:	35 mm ²
IP-Code:	IP 20	Regeneration mode:	Yes
Plug Type:	Protected contact plug	Gauge:	with digital display
