

Replacement of MDB2882 (WVA 24529) with MDB3779 (WVA 25087).

Mintex aims to streamline the designation from MDB2882 to MDB3779.

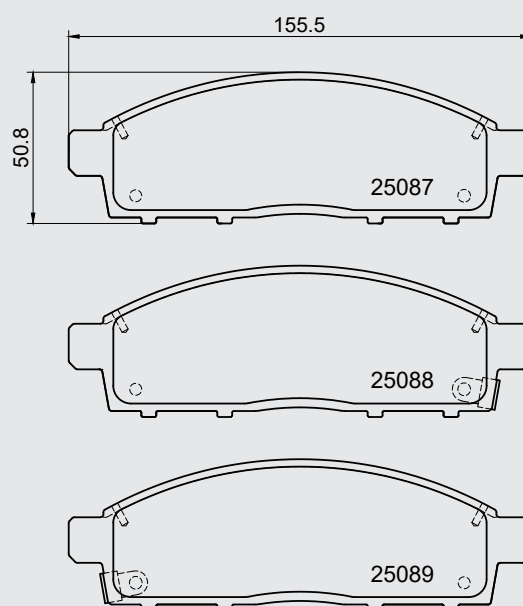

Given the identical nature of the brake pads we can ensure seamless assembly and operation.

This consolidation extends coverage to a broader range of vehicles under a singular reference, namely MDB3779 which comes with drill holes in the plate and therefore is able to cover applications of both part numbers.

MDB2882

MDB3779

The current inventory of MDB2882 can be effortlessly marketed and sold without any complications.
